

JEMSU "Fire Drill" Checklist

(Print this out and keep it accessible for the Ad-Ops team)

If you suspect an account compromise, DO NOT WAIT. Execute the following immediately:

- [] **1. Sound the Alarm:** Notify the Director of Digital Advertising and the IT/Security lead immediately via Slack or phone (do not use email, as the attacker may be monitoring it).
- [] **2. Stop the Spend:** Log into the Google Ads MCC and PAUSE the affected accounts or set budgets to \$0.
- [] **3. Terminate Sessions:** The compromised user goes to their Google Account settings -> Security -> "Manage all devices" -> **Sign Out** of everything.
- [] **4. Revoke Unauthorized Access:** Check the "Access and Security" tab in Google Ads. Delete any user you do not explicitly recognize.
- [] **5. Reset Passwords:** The compromised user changes their Google Workspace password.
- [] **6. Document the Damage:** Go to "Change History" and export a log of everything that happened in the last 24 hours.
- [] **7. Do Not Delete Lures:** If a phishing email started this, DO NOT delete it. IT needs the email headers to see how it bypassed the spam filters.

For a more detailed response action plan please refer to the JEMSU Incident Response Playbook.
